

New Feature supports maintenance activities

All new StormSack insert filters are now supplied with internal polypropylene netting. The netting maintains the StormSacks shape and protects the external filter bag from accidental cuts and rips during maintenance activities. The rigid, extra stiff netting is especially critical when using automated vector trucks to remove sediments and solid debris from the filters.

For more information on the internal mesh liner, the StormSack or any of Fabco Industries Stormwater products or filter media solutions please contact the sales department at Tel: 631-393-6024; Fax: 631-501-5528 or email: Johnm@fabco-industries.com.
