

Nyloplast Catch IT

Easy Installation

Designed as a system to complement the Nyloplast-ADS drainage grates and frames, the Catch It offers clear advantages in terms of installation. Like most drain inlet filters, the Catch It installs below the protective iron grate treating the runoff water as it leaves the surrounding surfaces. However unlike most other designs, the Catch It does not use the grate frame ledge for support. Instead, Nyloplast-ADS has provided discrete mounting surfaces on the metal frame that either accept the Catch-It directly or a special transition/adaptor plate that is designed to accept the Catch It. Installation requires: No cutting, fitting or modification. And the grate remains flush with the frame!
